GRADE DESCRIPTION:

Chlorgen purified salt is prepared for making brine for electrolytic cell plants; to help sustain the guaranteed performance of the cell plant. The low levels of calcium, magnesium and sulphate ions in this salt ensure minimum deposit on cell electrodes over extended use, thus greatly reducing the need to acid wash the cells. This therefore reduces the need to store and handle acids but more importantly prolongs the life of the expensive precious metal electrodes.

Chlorgen salt contains low insoluble matter, thus substantially reducing the characteristic surface scum experienced when large quantities of salt are dissolved to form a brine solution. Chlorgen salt has been specially developed for production of sodium hypochlorite in industrial salt chlorination systems as well as for domestic swimming pool chlorinators. Chlorgen salt may also be used for cell regeneration of water softeners. In fact anywhere a good quality brine is required this salt should be used.
